

Code Breaker - Skeletons Backbone

// Sparking Challenge Code Breaker

Description

Let's create another web application with HTML, CSS and JavaScript!

Your first task would be to create a HTML page with:

- A Header stating "Substitution Cipher Frequency Analyzer" OR you can come up with a cool name for your app!
- A short explanation of substitution ciphers and frequency analysis
- A div with id **setup-container**, containing the following:
 - A textarea that shows at least **100** columns and **10** rows
 - An ordered list containing instructions on how to use your webapp!
 - A Submit Button with the text "Analyze!" (id **analyze-btn**)
